

Information and Products for use in Food and Beverage Processing

Introduction

As a food and beverage producer, you are striving for consistent quality regardless of where your product is manufactured or distributed. You're also faced with the challenge to respond more quickly than your competition to changes in consumer demand. At the same time, your industry requires global compatibility, consolidation of suppliers, and compliance with new regulations for operations.

At Thomas & Betts, we understand the food and beverage processing industry and the challenges faced by its electricians. We're focusing on products designed to address issues in every phase of your operation so you can focus on cost, quality, flexibility and regulatory challenges across the production cycle — from raw materials through delivery.

Our expertise in inventive engineering and manufacturing new products will help you make the best use of the valuable human, physical and financial resources in your plant.

Reliability

Thomas & Betts, the time-tested leader in electrical components for food and beverage operations can offer you the following:

- Quality brands that have proven themselves over time so you can rely on their performance.
- Inventive design and manufacture of problem-solving products for electrical maintenance.
- ISO and industry-specific adherence to specification standards to provide consistent quality and safety in our products.

Cost Savings

With the spotlight on total manufacturing costs, quality of material or workmanship is quickly being identified and corrected through new specifications. Today's total quality environment is pinpointing production costs, even down to the level of a cable tie. T&B delivers significant reductions in your Total Cost of Ownership (TCO) and has established a reputation for:

- Engineering labor saving products that perform consistently with fewer call-backs.
- Designing products with multiple materials ensuring the largest range of choices for multiple installations and environments.

- Offering a best of class warranty and returns policy.
- World-class information and distribution systems to meet your customer service needs promptly and efficiently.
- Supplying you with the right products, convenient packaging, on-time delivery and competitive pricing.

Quality and consistency along with flexibility, demand highest performance from modern food and beverage producers.

Flexibility

Newer, high-speed packaging equipment may make the difference in profit in your plant, and at the same time may require the greatest change in your distribution wiring — in half the time it took a few years ago. Today's electrical system will likely contain components from several foreign manufacturers, requiring global compatibility in material performance, ease of installation and continued maintenance to ensure maximum return on investment.

Thomas & Betts will ease the transitions in your facility through:

- Offering the largest variety of solutions for superior electrical construction in multiple food handling environments.
- Fast, reliable made-to-order products that meet your unique specifications.
- The convenience of a nationwide network of stocking electrical distributors.

T&B's local and technical support will offer clear, consistent information regarding training, codes and standards, and product recommendations. Backed by the largest single source of electrical products in the industry, T&B will work in partnership with your electrical staff to provide the best solutions for your maintenance operations while satisfying financial, consumer and retailer demands.
