

Dependability.

Meeting Canada's growing demand for electricity responsibly and efficiently often requires managing seemingly conflicting priorities. In such a complex environment, dependable supplier partnerships can help to simplify the process.

Thomas & Betts works with utilities and municipalities across Canada to develop efficient, innovative and flexible transmission and distribution solutions for infrastructure expansion and maintenance projects. Wherever they are used, our products help control, manage and optimize the flow of electricity.

Elastimold®

Switchgear and circuit protectors; pre-molded connectors

Joslyn™ Hi-Voltage/Fisher Pierce®

High-voltage electric switches, reclosers, vacuum interruptor attachments and related products

Hi-Tech®

High-voltage, current limiting fuses

Meyer®

Steel transmission structures

All-Struct™

Roadway, traffic and area lighting structures

Thomas & Betts is proud to play a role in helping Canadian electric utilities provide a reliable, safe, sustainable and affordable supply of electricity to homes and businesses across the country.
