

Electricity.

At work, at home and all points in between, it's an indispensable part of Canadian life. As demand for electricity continues to grow, so does the need for a reliable infrastructure. That's where Thomas & Betts Canada comes in.

Our people work with Canadian utilities and municipalities to develop efficient, innovative and flexible solutions for both infrastructure maintenance and new construction. Our products help control, manage and optimize the flow of electricity wherever they are used.

- **Elastimold®** switchgear, circuit protectors and pre-molded connectors
- **Hi-Tech®** high voltage current limiting fuses
- **Lighting structures** — aluminum and steel structures, arms and high-mast poles
- **Meyer®** steel transmission structures

We're proud to play a role in helping Canadians meet the challenges of today, tomorrow and future generations.
