Iberville® CI7538 Double-Sided Strap Drastically reduces installation time for conduit runs

www.tnb-canada.com

The new **IBERVILLE®** CI7538 double-sided strap simplifies the installation of conduit runs on concrete or concrete block walls.

Double-sided, this all new strap design can retain two parallel conduits with only one machine screw, cutting installation time in half. Highly versatile, the CI7538 strap retains any combination of 1/2" and 3/4" EMT or rigid conduit; 3/8", 1/2" and 3/4" flexible conduit and 0.59" - 1.10" diameter teck cable. No need to stock different strap sizes or to use pliers to adapt the strap to the conduit size.

Designed and manufactured in Canada, the CI7538 strap is another **IBERVILLE** solution to everyday installation problems.

T&B monthly **tips**

Do you know...

... the origin of the **LHTQ™** family name?

- L = "Loomex" ready clamp*
- H = Holes for external nailing
- T = Tabs for positioning
- Q = Quick mounting

Put it all together and the **LHTQ** name stands for fast, accurate installation every time.

* All **LHTQ** boxes are CSA approved for use with non-metallic sheathed cable and armoured cable.
