*The first CSA-approved Luminaire Disconnect*

As of January 1, 2007, all new and existing fluorescent lighting fixtures and ballasts over 150V must be equipped with integrated electrical disconnects. CSA-approved, the new Marrette<sup>®</sup> Luminaire Disconnect from Thomas & Betts is the device of choice to meet this new requirement.

When disconnected, the device enables safe servicing of the fixture and ballast without exposure to dangerous electrical shock hazards. Connected, it provides superior conductivity.

Quick and easy to install, the Marrette<sup>®</sup> Luminaire Disconnect is available in convenient kits for electricians and bulk packaging for fixture and ballast manufacturers.

**FREE!** Order your sample at [www.tnb-canada.com/en/disconnect.asp](http://www.tnb-canada.com/en/disconnect.asp) or contact your local Thomas & Betts sales representative for complete details. Offer valid while quantities last.
