CI820-DX

DEVICE BOX SUPPORTS

The CI820-DX is another IBERVILLE® product designed and manufactured in Canada to provide you with better solutions for everyday problems.

The CI820-DX is versatile and can be used in 1/2" drywall and double 1/2" drywall applications. It will not dig into the inner surface of the drywall thus eliminating the possibility that the installation will loosen up over time.

The built-in measuring guides remove the guesswork on how big a hole has to be made to ensure that the finishing cover hides the installation.

Device Box Supports:

CI820-DX

CI820-DX is suitable for all device boxes incorporating mounting ears.

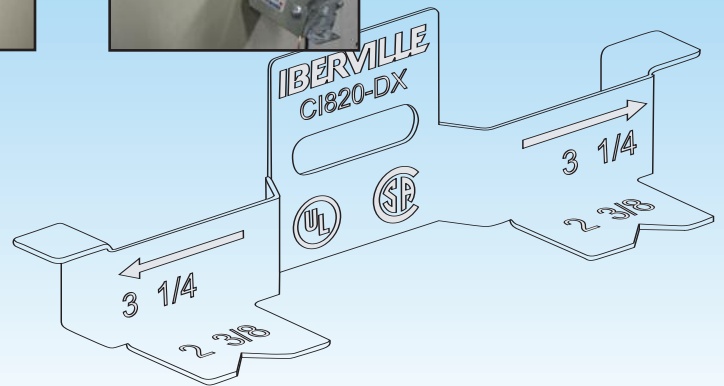

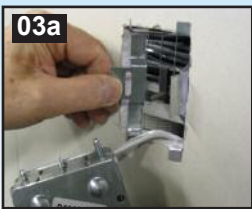

01 After determining the location for the device, trace a 2-5/16" by 3-1/4" pattern on the drywall and carefully cut out the pattern keeping within the confines of the lines.

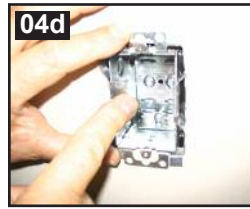

02 Pull the cables through the opening and secure them to the outlet box.

03 Snap one CI820-DX into place on each side of the opening.

04 Push the outlet box into the opening ensuring that the mounting ears are flush to the drywall and do not piggyback onto the flanges of the CI820-DX. Bend the protrusions over the sides of the box and crimp into place. (It is recommended that pliers be used to ensure a strong hold on the box.)

05 Proceed to wire the device using approved wiring procedures.

06 The box is secured in place.
